

What Is Claimed Is:

1. A hair brush in which multiple bristles are set upright on a brush body, wherein cutter provided with a cutting edge is set upright nearby said bristles.

2. A hair brush according to claim 1, wherein the cutting edge of said cutter is disposed opposite the bristles.

3. A hair brush according to claim 1, wherein said cutter is set upright in a specific region of the brush body.

4. A hair brush according to claim 1, wherein the cutting edge of said cutter is disposed so as to face the adjacent bristles.

5. A hair brush according to claim 1, wherein the height of the cutting edge of said cutter is set lower than the height of the bristles.

6. A hair brush according to claim 1, wherein the height of the cutting edge of said cutter is roughly equal to the height of the bristles, and a protective member for the scalp is provided on the upper end of the cutter.

7. A hair brush according to claim 1, wherein said cutter and bristles are inclined so

as to come apart gradually, increasing the distance therebetween, in the upward and outward directions.

8. A hair brush according to claim 1, wherein the cross section of the bristles adjacent to said cutter on the cutting edge side of said cutter is at least in the form of a circular arc.

9. A hair brush according to claim 1, wherein a cover with an approximately U-shaped cross section is provided, the cutting edge of the cutter is accommodated inside the cover so as to be exposed through an opening in the cover, and projections protruding slightly beyond the extension line of the cutting edge in the direction perpendicular to the extension line of the cutting edge of the cutter are provided with constant spacing in said cover.

10. A hair brush according to claim 1, wherein a replaceable cutting unit for a hair brush in which bristles are set upright in a cutting unit base, a cutter provided with a cutting edge is set upright nearby the bristles, and the cutting edge of the cutter is disposed so as to face the bristles is provided so that it can be attached to the brush body and detached therefrom.

11. A hair brush according to claim 1, wherein said cutting unit is provided so that it can be attached to the brush body and detached therefrom.

12. A hair brush according to claim 1, wherein a fitting hole is provided in said brush body and the cutting unit base of said replaceable cutting unit for a hair brush is configured so as

to correspond to the fitting hole.

13. A hair brush in which multiple bristles are set upright on a brush body, according to claim 1, wherein both bristles also serving as holding members for cutters, on which the cutters are mounted, and bristles not provided with cutters are set upright on the brush body, and the cutting edges of said cutters are arranged so as to face the bristles which are not provided with cutters.

14. A hair brush in which multiple bristles are set upright on a brush body, wherein a cutter with height less than the height of the bristles is provided in a certain region of the brush body between the bristles, and the cutting edge of the cutter is directed to the outside of the brush body and is disposed so as to be separated from the brush body.

15. A replaceable cutting unit for a hair brush in which bristles are set upright in a cutting unit base and the cutter comprising a cutting edge is set upright nearby said bristles.

16. A replaceable cutting unit for a hair brush according to claim 15, wherein bristles are set upright in the cutting unit base, the cutter comprising a cutting edge is set upright nearby said bristles, and the cutting edge of the cutter is disposed so as to face the bristles.

17. A replaceable cutting unit for a hair brush in which a cutter is set upright in a cutting unit base.

18. A replaceable cutting unit for a hair brush according to claim 15; wherein a cutting edge of the cutter is disposed so as to face the adjacent bristles.

19. A replaceable cutting unit for a hair brush according to claim 15, wherein the height of the cutting edge of said cutter is set lower than the height of the bristles.

20. A replaceable cutting unit for a hair brush according to claim 15, wherein the height of the cutting edge of said cutter is almost equal to the height of the bristles, and a protective member for the scalp is provided on the upper end of the cutter.

21. A replaceable cutting unit for a hair brush according to claim 15, wherein said cutter and bristles are inclined so as to come apart gradually, increasing the distance therebetween, in the upward direction.

22. A replaceable cutting unit for a hair brush according to claim 15, wherein the cross section of the bristles adjacent to said cutter on the cutting edge side of said cutter is at least in the form of a circular arc.

23. A replaceable cutting unit for a hair brush according to claim 15, wherein a cover with an approximately U-shaped cross section is provided, the cutting edge of the cutter is accommodated inside the cover so as to be exposed through an opening in the cover, and projections protruding slightly beyond the extension line of the cutting edge in a direction

perpendicular to the extension line of the cutting edge of the cutter are provided with constant spacing in said cover.

24. A replaceable cutting unit for a hair brush according to claim 15, wherein both bristles also serving as holding members for cutters, on which the cutters are mounted, and bristles not provided with said cutters are set upright on a cutting unit base, and the cutting edges of said cutters are arranged so as to face the bristles which are not provided with cutters.

25. A replaceable cutting unit for a hair brush in which a pair of support members for a cutter are set upright with a constant spacing therebetween on a cutting unit base, and a cutting edge of the cutter is disposed between the pair of support members for a cutter so as to be directed outward of the cutting unit base and to be separated from the cutting unit base.
